

Cell Division & Differentiation

January 30- February 10, 2012

Course Coordinator: Helder Maiato

Objectives

In this course, students will be exposed to key lectures on leading-edge, cell division/differentiation-related topics by world-renowned experts. These lectures will cover fundamental concepts but will be specially oriented towards the identification of present challenges in the field and how they are being experimentally addressed. Lectures will be complemented with a short microscopy overview and research seminars on topics under development in IBMC laboratories. From the first day of the course, groups of 2 students will team up with a teaching assistant and will be assigned a research project to be carried out during the nearly two weeks of the course. This includes the preparation of the necessary reagents, design and execution of experimental work, interpretation of the data, public discussion of the results and peer-review. The project work will represent the main student evaluation procedure for this course.

Program

Week 1 (Jan 30- Feb 3)

	Monday	Tuesday	Wednesday	Thursday	Friday
9:00-10:00	<i>Course overview & Project assignment</i> (Main Audit)	The Centrosome Mónica Bettencourt-Dias (Main Audit)	Eukaryotic Cell division Helder Maiato (Audit B)	Prokaryotic Cell Division Adriano Henriques (Main Audit)	Projects
10:00-12:00					
12:00-13:00	Cell Cycle Regulation & Checkpoints Claudio Sunkel (Main audit)	Research Seminar 1 Sara Morais da Silva	Research Seminar 2 Elsa Logarinho	Research Seminar 3 Michael Schrader	IBMC Seminar: "Mechanisms of formation and correction of kinetochore misattachments" Daniela Cimini (Main Audit)
13:00-14:00	Lunch break	Lunch break	Lunch break	Lunch break	Lunch break
14:00-15:00	Microscopy Overview Paula Sampaio (Audit B)	Visit microscopes	Projects		Mechanisms of nuclear positioning during cell migration and muscle formation Edgar Gomes (Main Audit)
15:00-17:30	Special Seminar: "Mitotic spindle assembly in 3-D: Spatial constraints and facilitating mechanisms" Alexey Khodjakov (Main Audit)				

Week 2 (February 06-10)

	Monday	Tuesday	Wednesday	Thursday	Friday
10:00-12:30	<h1>Projects</h1>				Projects discussion (Main Audit)
12:30-14:00					Lunch break
14:00-16:00					Projects discussion (Main Audit)
16:00-18:00					
18:00-19:00					Closing session and course evaluation (Main Audit)
					Beer party

Microscopy Overview

Tuesday 31/01, 14:00-15:00 (visit to the microscopes: 2 groups, 2x 30 min rotations)

Scanning confocal, Spinning-disk confocal

Paula Sampaio

Laser microsurgery, wide-field/3D-deconvolution

António Pereira

Research Seminar 1

Tuesday 31/01, Main Audit, 12:00-13:00

Tumorigenesis in the absence of the spindle assembly checkpoint

Sara Morais da Silva

Research Seminar 2

Wednesday 01/02, Audit B, 12:00-13:00

Mechanism of multipolar spindle formation in the absence of centrosome amplification

Elsa Logarinho

Research Seminar 3

Thursday 02/02, Main Audit, 12:00-13:00

Organelle partitioning during cell division

Michael Schrader
